

Welcome

Thank you for purchasing CyberLink PowerDirector 2026. This Quick Start Guide contains all the information you need to get your new software up and running on your computer, and provides an overview of some of its features.

Note: you can access the full help file anywhere in the PowerDirector program by pressing the F1 key on your keyboard.

Downloading PowerDirector

To download your software, just follow these simple steps:

1. Go to the following website link in your Internet browser:
<https://www.cyberlink.com/box>
2. Enter your product key in the available box. Your product key can be found on the card that was included in the box.
3. Click the **Redeem** button.

4. Find your new software in the list, and then click the **Download** button to download your software to the Downloads folder on your computer.

Installing PowerDirector

To install PowerDirector, find the downloaded file in the Downloads folder on your computer. It should be similar to CyberLink_PowerDirector_Downloader.exe.

Before Installing

Before you install PowerDirector, here are some recommendations to ensure the installation goes smoothly.

- Close all other applications, including anti-virus software.
- If you previously installed a trial version of PowerDirector, it is recommended that you uninstall it before proceeding.

- Make sure your computer meets PowerDirector's minimum system requirements (see the box or our product page on the Internet).
- Ensure all your computer's drivers are up-to-date, including firmware for a disc drive and any other hardware.

Installation

To install PowerDirector on your computer, do this:

1. Double click on the downloaded .exe file.
2. Review the **Privacy Policy** and **End User License Agreement (EULA)**, which grants you a license to use the software, by clicking on the available links. If you accept the agreement, select the **I accept the terms of the Privacy Policy and EULA** option. If you do not accept, the installation process will not continue, as you cannot install the software unless you accept the agreement.
3. If required, click **Installation Settings** to set the **Language** of the installation and select the **Location** where the program will be installed. To install to a different folder, click **Browse**, select another folder, and then click **OK**.

Note: you can always change the UI language later in General settings.

4. Click on the **Install** button.
5. Setup will download the required components and start the installation process.

Installing Extra Templates

You can download and install extra templates that will help you create your video productions in PowerDirector. To get your extra templates, do this:

Note: you must first install PowerDirector before installing the templates.

1. Go to the following website link in your Internet browser to download the CyberLink Application Manager (CAM):
https://www.cyberlink.com/downloads/application-manager/download_en_US.html
2. Follow the steps to install CAM.
3. After CAM is installed, launch it.
4. Log in to your CyberLink account in the CAM window. If you don't have a CyberLink account, click **Create an account** to register for one.
5. In the **Resources > Effect Packs** section on the left, click the **Install** button associated to the available effect packs. CAM will download and then auto install the effect packs for you.

Launching PowerDirector

Once CyberLink PowerDirector is installed, double-click on the desktop shortcut (or click **Launch PowerDirector** at the end of the installation wizard) to start the program.

Note: the first time you launch the program, you are asked to enter the product key. It can be found on the card that was included in the box.

CyberLink Cloud

With your purchase of PowerDirector, you get a free subscription to the **CyberLink Cloud** service for one year, which includes free cloud storage space. CyberLink Cloud allows you to back up your projects, templates, and program preferences, which can be downloaded back to your computer.

You can redeem your free one year subscription the first time you launch PowerDirector by going to the **CyberLink Cloud** tab in Preferences and then clicking the **Redeem CyberLink Cloud Service** link. Follow the instructions on the web site to redeem your subscription.

Getting You Started in PowerDirector 2026

Follow these steps to start editing your videos in CyberLink PowerDirector.

Importing Media into PowerDirector

The first step in creating your production is to import your project's media into PowerDirector. You can import media by:

- **Importing media files:** if you already have video, audio, and image files on your computer's hard drive, you can import the files directly into the media library. This is done by clicking on the **Import** button in **Media**.
- **Capturing media:** you can capture media from a variety of sources, including a webcam, microphone, and more. Just click the **Record** button in **Media**, and then select **Record from Webcam** to enter the Capture module.
- **Downloading media:** you can download templates and effects from DirectorZone and your backed up media from CyberLink Cloud. Just click the **Import** button in **Media** to start downloading content into the media library.

Editing Your Media

Once you have your media in the media library, you can begin putting your video production together. The following outlines some of the procedures and features you can use to create your production.

Video Intro and Outro Templates

In **Templates** you can start your video project off with video intros shared by our community of creatives on DirectorZone. Video intro templates can be added directly to the timeline, or first customized in the Video Intro Designer. Use video outro templates, which can be customized in the Video Outro Designer, to create the perfect ending for your video.

Arranging Media in Your Production

To insert videos, images, and audio into the workspace timeline, click the **Media** button and then manually drag and drop media clips from the library, to a desired position on a track to add it to the timeline.

Continue this process until you create your production. You add the media clips in the order that tells the story you want to tell.

Stylish Effects and Templates

Use the hundreds of professional quality built-in effects and templates available in **Titles**, **Transitions**, **Effects**, and **Overlays** to add creativity and flair to your production.

Edit Like a Pro With AI

Instantly create effects that track objects, people, and faces, remove backgrounds in videos or images, modify voices or auto fix audio, generate subtitles from speech, and much more with AI.

Use the Edit, Mask, Speed, and Animation Tools

Select a media clip on the timeline and then click **Edit** to access a number of tools you can use to edit your media (Trim, Crop, Chroma Key, Motion Tracker, Audio Editor, make color fixes and enhancements, and much more). Here you can also add masks to your media clips, modify video/audio speed, and add in, out, or looped animation on video and image clips.

Advanced Editing for All Your Media

Use PowerDirector's powerful Advanced Editing windows to seamlessly customize the effects and templates in your projects, and edit your videos. Click the **Edit** button above the timeline, and then **Advanced** when editing title effects, media clips, or

overlays to open the Advanced Title/Overlay Editing window, where you can use precise keyframe controls to create your own unique effects and videos.

Outputting Your Video Production

Once you are done editing your video production, you can output it by creating a video file on your computer or burning it to a disc.

Exporting a Video File

Click the **Export** button to output your production as a video file, or upload it directly to YouTube, TikTok, or another social media web site. You can create video files with up to 4K Ultra HD quality, in the H.264 AVC, H.265 HEVC, and other formats.

Burning Production to a Disc

If you want to burn your production to a disc with disc menus you customize in the Menu Designer, click the **Export** button and then select the **DVD/BD** tab. You can burn Blu-ray Discs with Full HD 50p/60p video profiles, save productions as created DVD and Blu-ray disc ISO images, and more.

Resources

The following are some helpful resources that are available if ever you need them.

- **Learning Center:** if you need help with a feature, or you want to learn more about what PowerDirector has to offer, just go to CyberLink's Learning Center for video tutorials and much more:
<https://www.cyberlink.com/learning>
- **Help File:** if you need assistance with a specific feature, click the **?** icon at the top of the program window, and then select **PowerDirector Help** (or press the F1 key on your keyboard) to open the help file.
- **Search Knowledge Base:** search the product knowledge base, which includes frequently asked questions about the program and more:
<https://www.cyberlink.com/cs-resource>
- **Feedback Forum:** start a discussion about PowerDirector or make a program feature request on our feedback forum:
<https://www.cyberlink.com/feedback-forum/powerdirector>
- **Customer Support:** solutions to your problems are available 24 hours a day at no cost on the CyberLink Customer Support page:
<https://www.cyberlink.com/support/index.html>
